HYTROL PLASTIC CHAIN CONVEYOR

Connex® — Hytrol's plastic chain conveying solution — delivers the flexibility and modularity required within today's supply chain. Serving as the key link between processing and distribution, Connex® offers the ideal transport solution for food, packaging, and pharmaceutical industries.

WHAT IS CONNEX[®]?

Connex[®] is a strong, yet flexible line of plastic chain conveyors made to accommodate a wide variety of industries and applications. Always factory tested, this line is available in aluminum (AL), stainless steel (SS), and powder-coated steel (PC) and is suitable for the following industries:

- Packaging
- Manufacturing
- Automotive
- Printing
- Optical
- Pharmaceuticals
- Food Production
- Plastics
- Personal Care

A detailed view of an industrial cable management system. Multiple bundles of cables, some purple and some grey, are neatly organized and routed through a series of white, curved metal channels. The system is supported by a complex framework of aluminum extrusions and black plastic clamps. In the background, various industrial components like sensors, cables, and structural elements are visible, suggesting a factory or laboratory setting. The overall scene highlights the precision and scalability of the cable management solution.

*Ideal for pharmaceuticals, manufacturing,
automotive, personal care, and optical*

ALUMINUM (AL)

Hytrol's aluminum conveyor systems are created with a compact and clean design to fit your needs. This complete line utilizes a positive drive with no chain slippage and is anodized to ensure corrosion resistance. When you need flexibility within your handling requirements, the Connex[®] aluminum conveyor makes integrations as seamless as possible. Its modular design is lightweight and easy to install with no welding required.

FEATURES

Modular for flexibility

Quiet - Under 70 dB(A)

Light and compact

Aluminum extruded profiles

Full line of guiderail and guiderail mounting options

Anodized for corrosion resistance

Standard chain with other chain types available

STAINLESS STEEL (SS)

Connex® stainless steel conveyor systems are customized to satisfy most layouts and handling requirements. These are offered with various chain types and utilize a modular construction for optimal flexibility. These conveyors use a positive drive with no chain slippage and an all-stainless steel frame, legs, and fasteners. The stainless steel line is easy to clean, easy to install, and offers a complete line of accessories.

FEATURES

Modular for flexibility

Built entirely from FDA-approved materials

Standard chain with other types available

Full line of guiderail and guiderail mounting options

Sanitary design may be used in wet applications

Ideal for packaging, pharmaceuticals, and food production where light duty cleaning is required

*Ideal for packaging, pharmaceuticals, manufacturing,
automotive, plastics, and printing*

POWDER-COATED STEEL (PC)

Hytrol's Connex® powder-coated steel systems are designed to satisfy most layouts and handling requirements. These plastic chain conveyors are utilized in many industries, from packaging to personal care. All Connex® systems give customers the flexibility needed when adapting to system and production requirements and come with a complete line of accessories.

FEATURES

Modular for flexibility

All-carbon steel frame, legs, and fasteners

Standard colors and nonstandard colors available
