Cart docking mechanism

Gravity Assisted Manual Conveyors for Parts Accumulation

Gravity rail & trolley transfer system with docking transfer carts

Turnkey solution for your part handling requirements

Loaded buffer

Manual singulating unload

Cart and structure connecting

ACCUMULATION AND STORAGE

- Two methods of accumulation:
 - rails can be monoplane with latching trolleys
 - rails can be slightly sloped allowing gravity to help accumulate parts
- Mobile carts are custom designed to accommodate your specific part requirements.
- Cart activated stoppers at ends of storage rails queue parts for transfer onto mobile carts.
- Smooth docking guides help precisely locate carts for part transfer.

Accumulated storage

SIMPLE AND COST EFFECTIVE

Bolted connections on the PAC-LINE™ conveyor combined with bolt together structure means little or no welding for quick, easy installation.

FLEXIBLE

This system can be designed with adjustable structure to accommodate a wide variety of parts for future programs.

IMPROVED PLANT SAFETY

A PACLINE buffer and storage system can help improve plant safety by reducing forklift traffic.

Adjustable structure
